

SnapIMS

Operator Guide

Version 0.5.1 - Verification Hardening Patch

Photo-first inventory ingestion for Canada VHS
FastAPI/Jinja browser workstation · SQLite schema 5

Use the final browser UI as the source of truth.
Mock and simulation screenshots do not prove live AI or live Shopify.

Quick start

The routine operator flow is intentionally short.

1. Photograph	2. Import	3. Identify	4. Review	5. Publish
START, shelf, tape photos, NEXT, repeat, END.	Preview grouping, then preserve/import.	Choose a provider and identify the batch.	Confirm title; optionally adjust Price or Discount; Approve & Next.	Simulate drafts and download the CSV.

- Edit is exception mode, not the routine path.
- Later postpones a tape and leaves it unfinished.
- Never change Item ID; it is permanent across Review, CSV, and Shopify.
- Real operator time per tape must be measured during the live pilot.

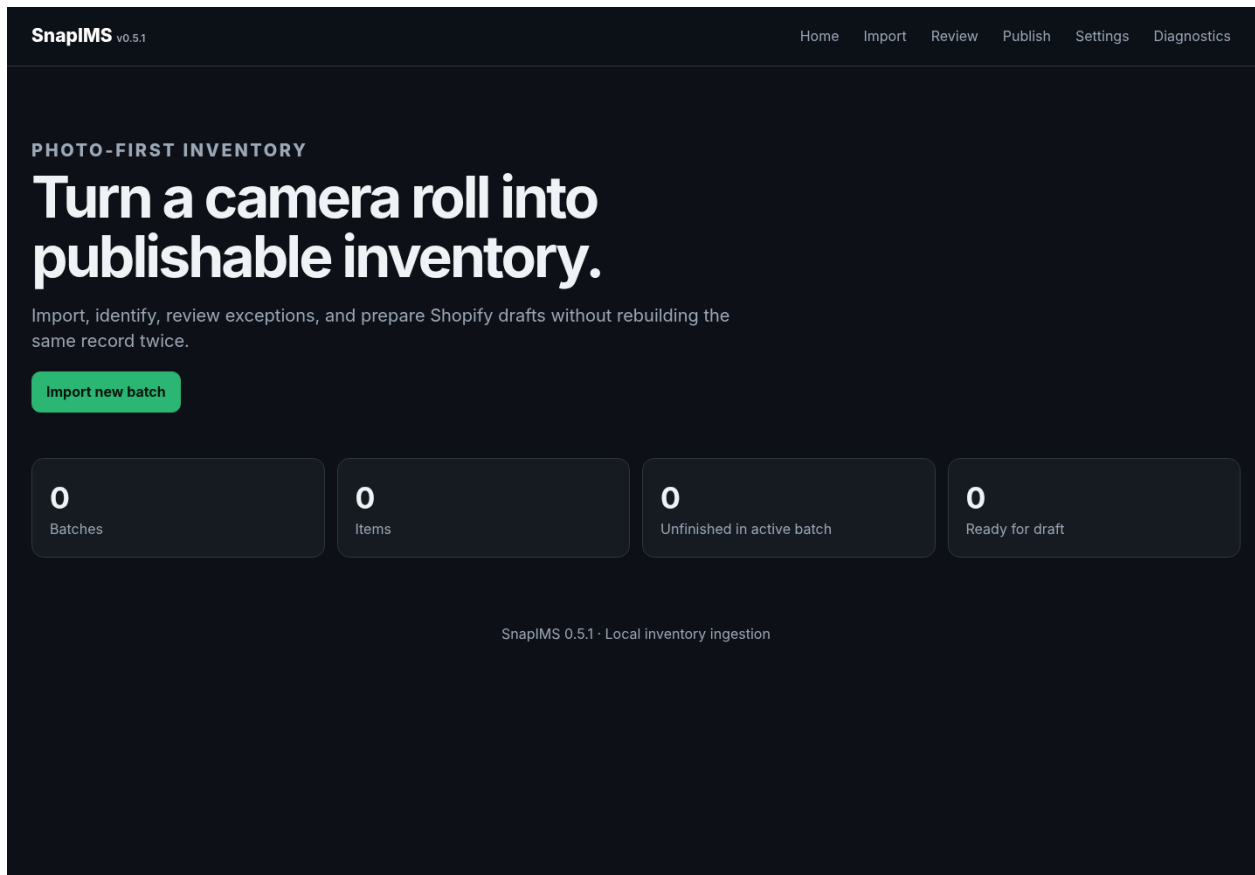

QR photography sequence

Card / action	Payload	Meaning
START	CVHS1:BATCH:START	Begins the batch.
LOCATION	CVHS1:LOC:A1 ... J10 or Q1	Applies shelf to following items.
PRODUCT	ordinary photos	First product photo is Front.
NEXT	CVHS1:ITEM:NEXT	Sole normal item boundary.
FLAGS	CVHS1:FLAG:RARE / REVIEW	Apply to next item, then reset.
END	CVHS1:BATCH:END	Closes final item and batch.

Time gaps never split items. CONT is deprecated compatibility only. Command images are preserved for audit but never attached to products.

Home

Start here. Import a new camera roll or continue the active batch. The summary cards show current workload.

00-home.png

Import - first run

Use Advanced once to choose the camera-roll folder. Save it as the incoming folder so routine later imports use the selector.

SnapIMS 0.5.1 · Local inventory ingestion

07-discount-quick-edit.png

Quick edit - Price and Discount

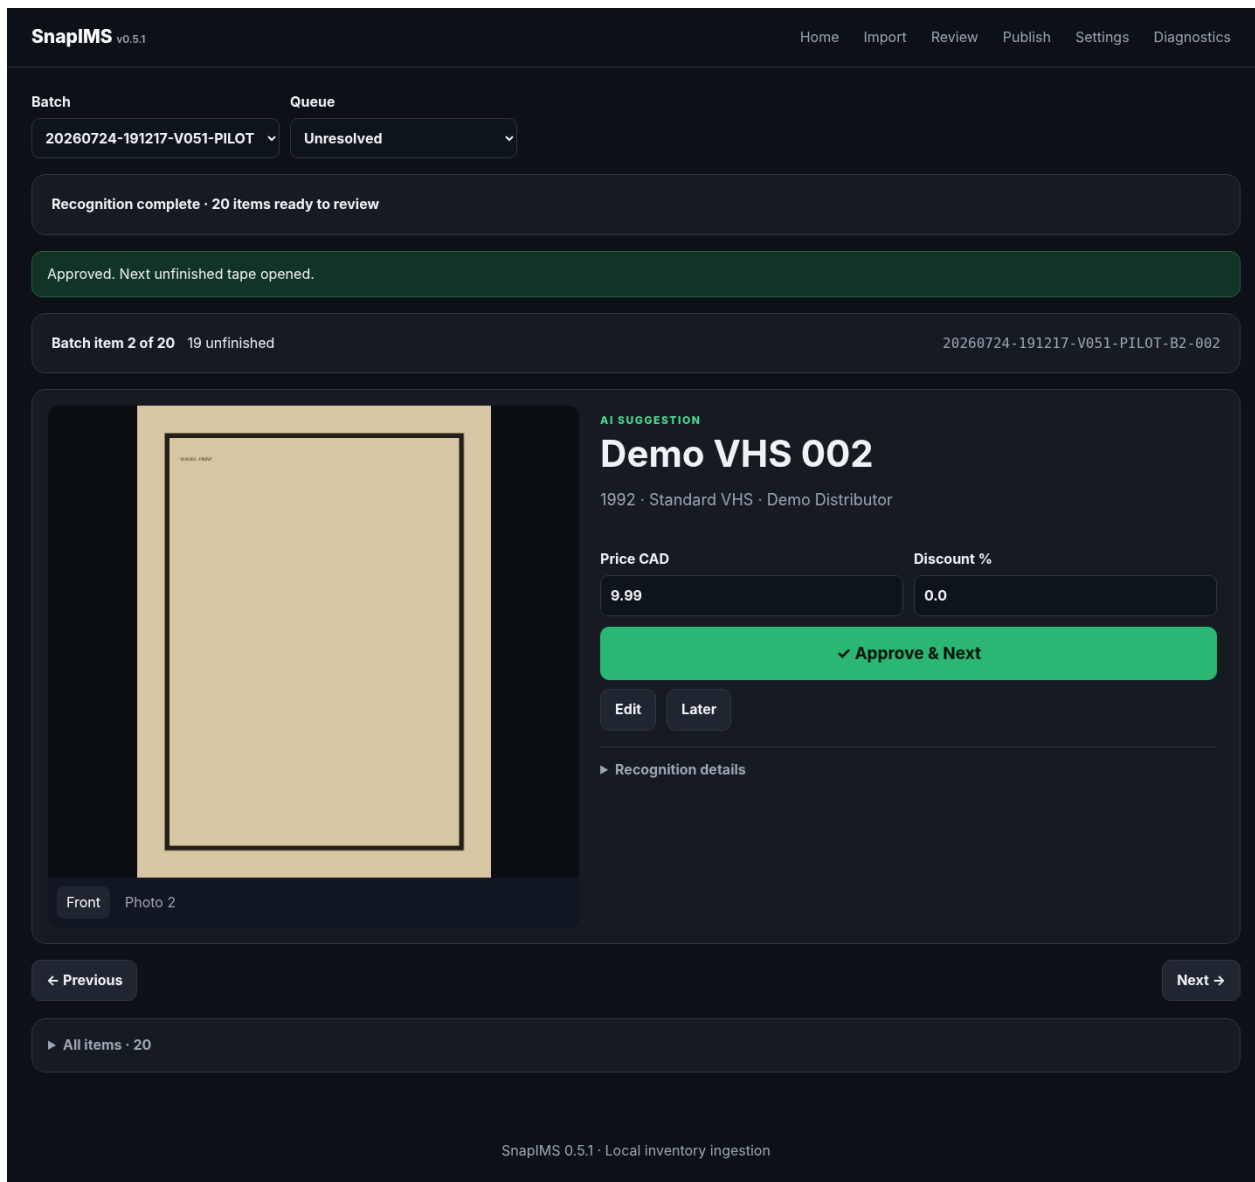

Both fields can be changed before the same one-action approval.

The screenshot displays the SnapIMS v0.5.1 interface. At the top, a navigation bar includes links for Home, Import, Review, Publish, Settings, and Diagnostics. Below this, a header section shows the 'Batch' (20260724-191217-V051-PILOT) and 'Queue' (Unresolved) status. A message bar indicates 'Recognition complete · 20 items ready to review'. A green bar below that says 'Approved. Next unfinished tape opened.' The main content area shows 'Batch item 20 of 20' with '1 unfinished' status and a unique identifier '20260724-191217-V051-PILOT-B2-020'. On the left, a placeholder image for the VHS tape is shown with a 'Front' label and 'Photo 2' caption. On the right, the 'AI SUGGESTION' for 'Demo VHS 020' is displayed, including its year (1990), type (Standard VHS), and distributor (Demo Distributor). Below this, the 'Price CAD' is set to 21.99 and the 'Discount %' is set to 15. A large green button labeled '✓ Approve & Next' is prominent, with 'Edit' and 'Later' buttons below it. A 'Recognition details' section is partially visible. At the bottom, navigation buttons for '← Previous' and 'Next →' are present, along with a status bar showing 'All items · 20'. The footer indicates 'SnapIMS 0.5.1 · Local inventory ingestion'.

08-price-discount-quick-edit.png

Automatic advancement

Approve & Next marks the current item Done, decrements unfinished count, and opens the next physical item exactly once.

09-next-item-opened.png

Review complete

When unfinished count reaches zero, the Review-complete message replaces normal recognition actions. Use Done to inspect records.

SnapIMS 0.5.1 · Local inventory ingestion

10-review-complete.png

Correct a completed item

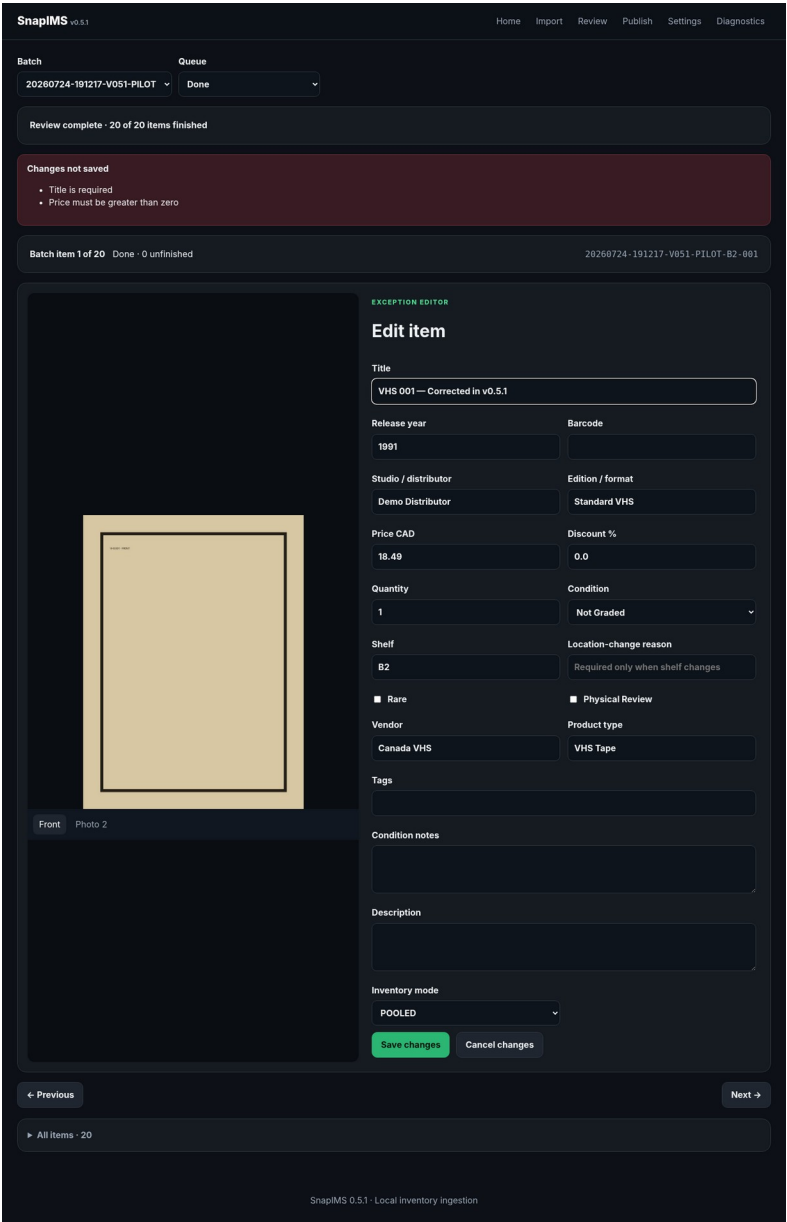

Edit item opens saved data. Save changes stays on the same immutable Item ID.

11-completed-item-corrected.png

Validation blocks invalid changes

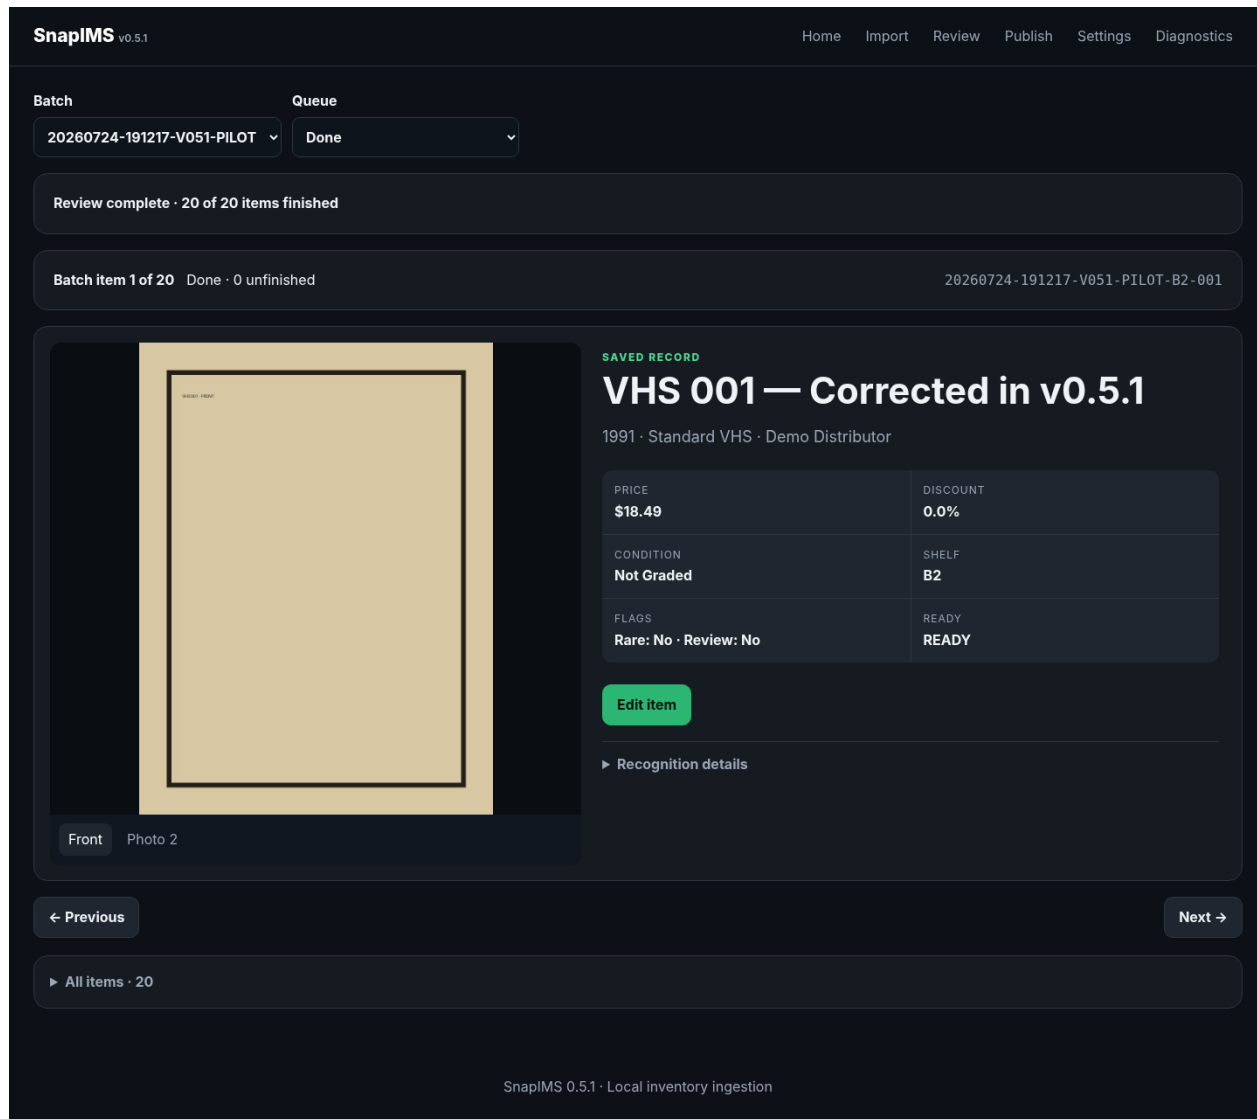

Blank Title and zero Price are rejected atomically. The editor remains open with exact errors.

12-invalid-edit-blocked.png

Cancel invalid changes

Cancel changes restores the last valid saved record without altering the Item ID.

13-invalid-edit-cancelled.png

Restart durability

After a full application-process restart, saved metadata and Item ID remain available from SQLite.

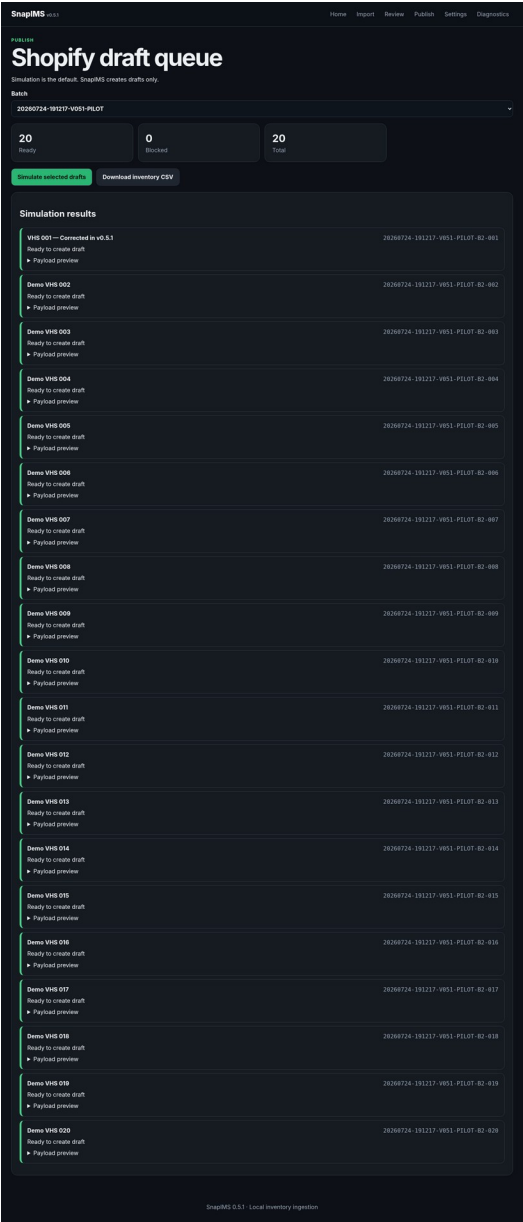

The screenshot displays the SnapIMS v0.5.1 web interface. At the top, a navigation bar includes links for Home, Import, Review, Publish, Settings, and Diagnostics. Below this, a header section shows the current Batch (20260724-191217-V051-PILOT) and Queue (Done). A status bar indicates 'Review complete · 20 of 20 items finished' and 'Batch item 1 of 20 Done · 0 unfinished'. The main content area features a large image of a VHS tape cover on the left, labeled 'Front' and 'Photo 2'. To the right, a 'SAVED RECORD' section displays the item title 'VHS 001 — Corrected in v0.5.1' and its description '1991 · Standard VHS · Demo Distributor'. Below this, a table lists item details: PRICE (\$18.49), DISCOUNT (0.0%), CONDITION (Not Graded), SHELF (B2), and FLAGS (Rare: No · Review: No). An 'Edit item' button is positioned below the table. A 'Recognition details' section is partially visible. At the bottom, navigation buttons for '← Previous' and 'Next →' are shown, along with a link to 'All items · 20'. The footer text reads 'SnapIMS 0.5.1 · Local inventory ingestion'.

Diagnostics

SQLite integrity must be ok, foreign-key violations zero, and schema version 5 before operation or restore.

30-diagnostics.png

End-of-batch checklist

- ☐ Unfinished count is zero and Review shows Review complete.
- ☐ Every title matches the photograph.
- ☐ Quick-edited Price and Discount values are intentional.
- ☐ Shelf and Rare / Physical Review flags match the physical tape.
- ☐ Completed corrections retain the original Item ID.
- ☐ Publish simulation shows expected Ready and Blocked counts.
- ☐ The browser-downloaded CSV contains the same Item IDs and saved titles.
- ☐ During the first real pilot, keep Shopify in simulation until physical CSV reconciliation passes.
- ☐ For the live-draft acceptance test, create exactly one draft and inspect it in Shopify.

1.0 acceptance gate

Version 1.0.0 is forbidden until the real 20-tape Pixel pilot, live AI, one live Shopify draft, physical CSV verification, restart durability, independent guide walkthrough, browser verification, and blocker review all pass.
