

SnapIMS Day-to-Day Guide

First-time operator workflow

Active release v0.15.0 · inventory schema 16 / 16 · August 5, 2026

This guide describes the verified SnapIMS browser interface and operator workflow. Shopify draft creation is the default; live publication requires an explicit typed confirmation.

1. Start and verify

```
export PATH="$HOME/.local/bin:$PATH"
snapims up
snapims status
```

- Version must show 0.15.0.
- Inventory schema must show 16 / 16.
- Open <http://127.0.0.1:8767/>.

2. Import one folder

1. Create one folder inside ~/SnapIMS-data/batches. The folder name becomes the default batch name.
2. Put photographs inside in capture order. Use only the NEXT ITEM QR between tapes.
3. Open Import, select the folder, enter a free-text location or leave it unassigned, then Preview.
4. Correct grouping if needed and Commit once the item count is correct.

BROWSER-100 Unassigned

SOURCE FOLDER NAME BROWSER-100	CURRENT BATCH DISPLAY NAME BROWSER-100	BATCH LOCATION Unassigned	SOURCE PATH /tmp/snapims-v0150-browser-data/batches/BROWSER-100
100 Items	100 Product photos	99 NEXT cards	3 Legacy ignored
1 Warnings			

Non-blocking Import notes

- 3 legacy SnapIMS command photograph(s) were ignored.

Import Preview with durable progress and interpreted items.

3. Recognize, review, and edit

- Run recognition when configured, then review every product field and evidence.
- Use Batch Editor for paging, search, filtering, exact Fill Down, Append Tags, and audited bulk changes.
- Hidden rows are deselected automatically so bulk actions cannot silently affect filtered-out records.

BATCH EDITOR

Bulk operator workstation

Fix uncertainty, bulk-price inventory, and approve valid rows without leaving the keyboard.

SnapIMS 0.15.0 · Exception-handling inventory workstation

Batch Editor with bounded paging and selection-safe bulk tools.

4. Connect Shopify

- Open Settings → Shopify connection.
- Enter the permanent .myshopify.com domain, Client ID, Client Secret, and current SnapIMS administrator password.
- Test and save securely, then confirm store identity, scopes, token status, and location discovery.
- Select the inventory location by name and the publication used for live products.
- Keep draft-first publishing enabled.

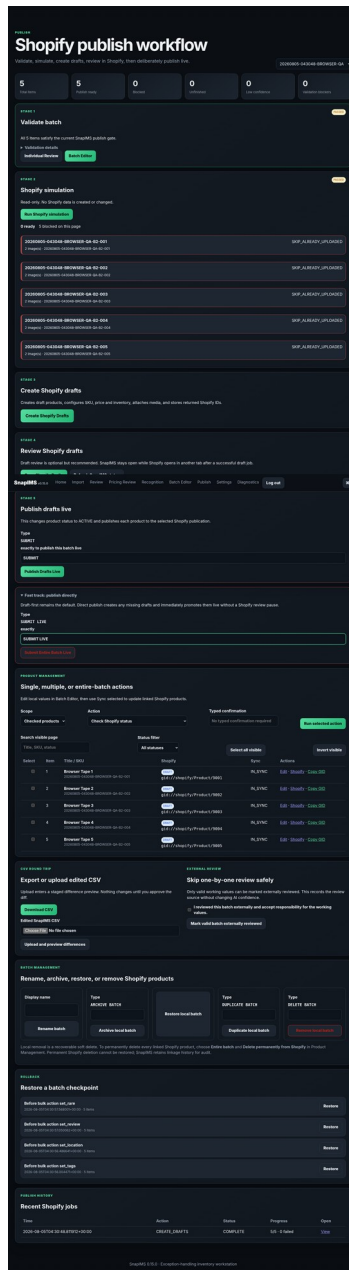

Verified Shopify client-credentials connection and named location/publication setup.

5. Publish

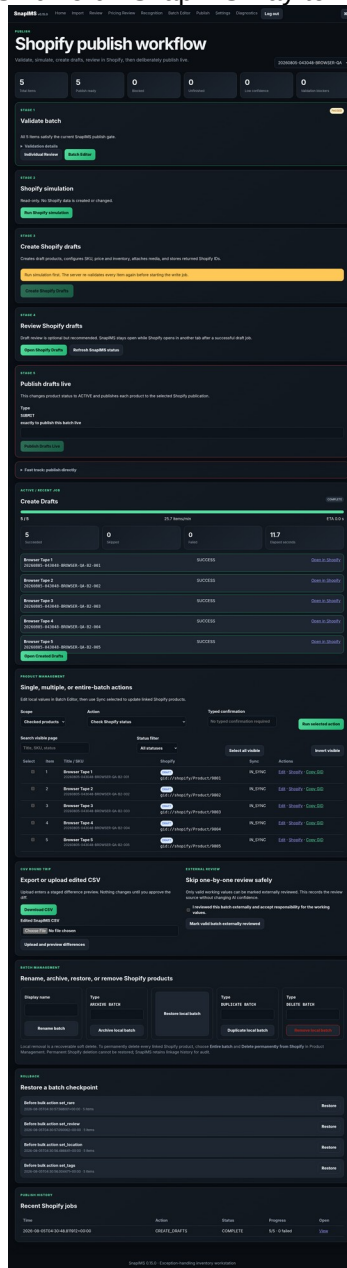

Shopify publish workflow

10. Open Publish and select the working batch.
11. Resolve all validation blockers. Live actions remain unavailable while blockers exist.
12. Run Shopify Simulation. Simulation performs no Shopify write.
13. Choose Create Shopify Drafts. SnapIMS uploads only publish-ready items and records Product, Variant, and Inventory Item GIDs.
14. After success, SnapIMS opens Shopify draft products in a separate browser tab. The Publish page also provides Open in Shopify, Copy Product Link, and Copy Product GID controls.

15. Review drafts when desired, then type SUBMIT and choose Publish Drafts Live.
16. For deliberate direct publication, type SUBMIT LIVE. This bypass is not the default path.

Publish page: validation, simulation, draft creation, live publication, and product management.

Completed draft job with Shopify links and durable item results.

6. End of batch

17. Confirm physical count, titles, prices, tags, condition, quantity, and location.
18. Verify draft/live results and failed rows independently.
19. Resolve conflicts or retry failures before archiving the batch.
20. Stop SnapIMS before an offline backup.
