Operator Guide

Version 0.5.0 - Reconstruction Release

Photo-first inventory ingestion for Canada VHS

Use the browser application as the source of truth. This guide matches the verified v0.5.0 interface.

Quick start

The routine operator flow is intentionally short.

1. Photograph	2. Import	3. Identify	4. Review	5. Publish
START, shelf, tape photos, NEXT, repeat, END.	Preview grouping, then preserve/import.	Choose a provider and identify the batch.	Confirm the title; optionally change Price or Discount; press ✓ Approve & Next.	Simulate drafts and download the CSV.

- Use Edit only when the recognized record needs deeper correction.
- Use Later to postpone a tape without finishing it.
- Never change an Item ID. It is the permanent identity used by Review, CSV, and Shopify.

QR photography sequence

NEXT is the sole normal item boundary. Time gaps never split items.

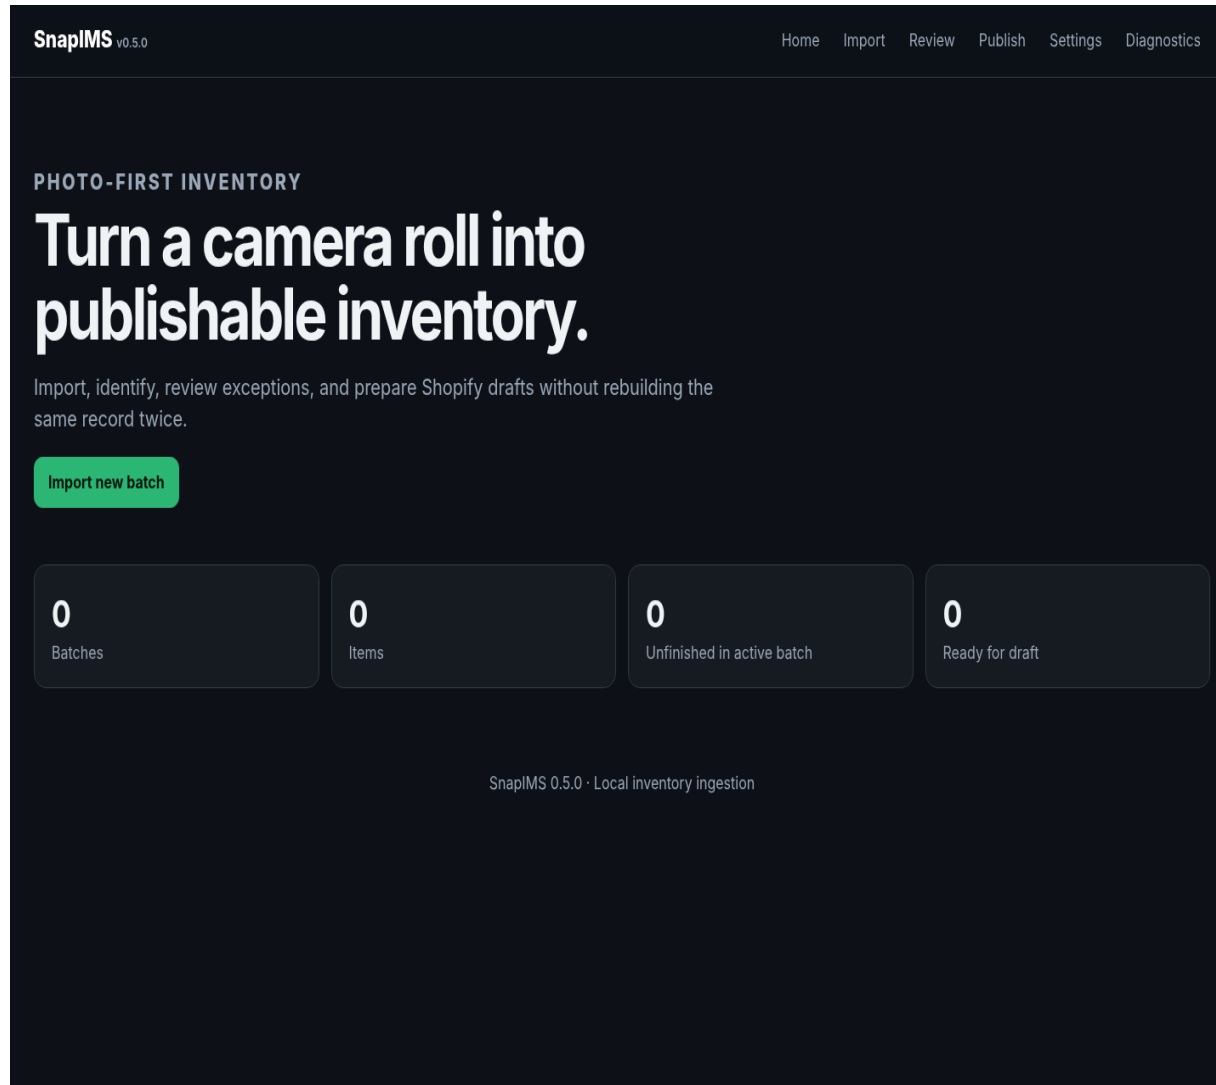

Card / action	Payload	Meaning
START	CVHS1:BATCH:START	Begins the batch.
LOCATION	CVHS1:LOC:A1 ... J10 or Q1	Applies the shelf to following items.
PRODUCT PHOTOS	Front, back, spine, open case	The first product photo becomes Front.
NEXT	CVHS1:ITEM:NEXT	Closes the current item and starts the next item when the next ordinary photo arrives.
FLAGS	CVHS1:FLAG:RARE / REVIEW	Apply to the next item and then reset.
END	CVHS1:BATCH:END	Closes the final item and batch.

- Do not photograph CONT in normal operation. It is deprecated compatibility only.
- Do not place a LOCATION card inside an item unless you intend the new shelf to begin after NEXT.
- Command images are preserved for audit but never attached to products.

Home

Your starting point and current workload.

- Use Import new batch to begin a camera roll.
- Continue Review returns to the active batch.
- Recent batches remain available without terminal commands.

Import - first run

Routine folder selection is visible; manual path entry remains Advanced.

- Select the configured incoming folder.
- Enter an optional batch name.
- Open Advanced only for first-time setup or recovery.

SnapIMS 0.5.0 · Local inventory ingestion

Review - before identification

One compact status explains what action is required.

- Select the provider. Mock is for testing; OpenAI requires a configured key.
- Press Identify items once. A duplicate start action is not shown while running.
- Physical item position remains visible below the status.

The screenshot displays the SnapIMS v0.5.0 web interface. At the top, a navigation bar includes links for Home, Import, Review, Publish, Settings, and Diagnostics. Below this, a 'Batch' dropdown is set to '20260724-180720-V050-PILOT' and a 'Queue' dropdown is set to 'Unresolved'. A status bar indicates '20 items ready to identify' and a 'Mock' dropdown is visible. A green 'Identify items' button is present. Below the status bar, a section for 'Batch item 1 of 20' shows '20 unfinished' items and a specific item ID '20260724-180720-V050-PILOT-B2-001'. The main area features a placeholder image for a VHS tape on the left, labeled 'Front' and 'Photo 2'. On the right, an 'AI SUGGESTION' section displays 'Untitled VHS' with the note 'Edition not identified · Studio not identified'. Below this, input fields for 'Price CAD' (0.00) and 'Discount %' (0) are shown. A large green button labeled '✓ Approve & Next' is prominent, with 'Edit' and 'Later' buttons below it. At the bottom, navigation buttons for '← Previous' and 'Next →' are visible, along with a link to '▶ All items · 20'. The footer text reads 'SnapIMS 0.5.0 · Local inventory ingestion'.

Review - fast path

The active tape, suggestion, Price, Discount, and primary action fit together.

- Look at the photograph and confirm the suggested title.
- Leave Price and Discount unchanged when correct.
- Press ✓ Approve & Next. No Edit mode or second confirmation is required.

The screenshot displays the SnapIMS v0.5.0 Review interface. At the top, a navigation bar includes links for Home, Import, Review, Publish, Settings, and Diagnostics. Below this, a header section shows the Batch (20260724-180720-V050-PILOT) and Queue (Unresolved) status. A message indicates 'Recognition complete - 20 items ready to review'. The main review area shows 'Batch item 1 of 20' with '20 unfinished' items. The item being reviewed is '20260724-180720-V050-PILOT-B2-001'. The interface features a large image placeholder for the VHS tape. To the right of the image, the 'AI SUGGESTION' for the title is 'Demo VHS 001', with a subtitle '1991 · Standard VHS · Demo Distributor'. Below the title, there are input fields for 'Price CAD' (9.99) and 'Discount %' (0.0). A prominent green button labeled '✓ Approve & Next' is positioned below these fields. Below the green button are 'Edit' and 'Later' buttons. A section titled 'Recognition details' is visible below the buttons. At the bottom of the interface, there are navigation buttons for '← Previous' and 'Next →', and a status bar indicating 'All items · 20'. The footer of the interface shows 'SnapIMS 0.5.0 · Local inventory ingestion'.

Quick edit - Price

Price can be corrected without entering the exception editor.

- Click Price, type the correct CAD value, then press ✓ Approve & Next.
- The typed value and accepted AI fields are saved together.
- There is no additional Save button.

The screenshot displays the SnapIMS v0.5.0 web interface. At the top, a navigation bar includes links for Home, Import, Review, Publish, Settings, and Diagnostics. Below this, a header section shows 'Batch' (20260724-180720-V050-PILOT) and 'Queue' (Unresolved) dropdowns. A status bar indicates 'Recognition complete · 20 Items ready to review' and 'Batch item 18 of 20 · 3 unfinished'. The main content area features a large image of a VHS tape labeled 'Front Photo 2'. To the right, the 'AI SUGGESTION' for 'Demo VHS 018' is shown, including details like '1998 · Standard VHS · Demo Distributor'. The 'Price CAD' field is set to 18.49, and the 'Discount %' field is set to 0.0. A prominent green button labeled '✓ Approve & Next' is visible, along with 'Edit' and 'Later' buttons. A 'Recognition details' section is partially visible below. At the bottom, navigation buttons for '← Previous' and 'Next →' are present, along with a link to '► All items · 20'. The footer indicates 'SnapIMS 0.5.0 · Local inventory ingestion'.

Quick edit - Discount

Discount is part of the same one-action approval flow.

- Enter a percentage from 0 to 100.
- The Publish simulation displays base price, discount, and final price.
- Press ✓ Approve & Next once.

SnapIMS 0.5.0 · Local inventory ingestion

Postpone with Later

Later is not a completion action.

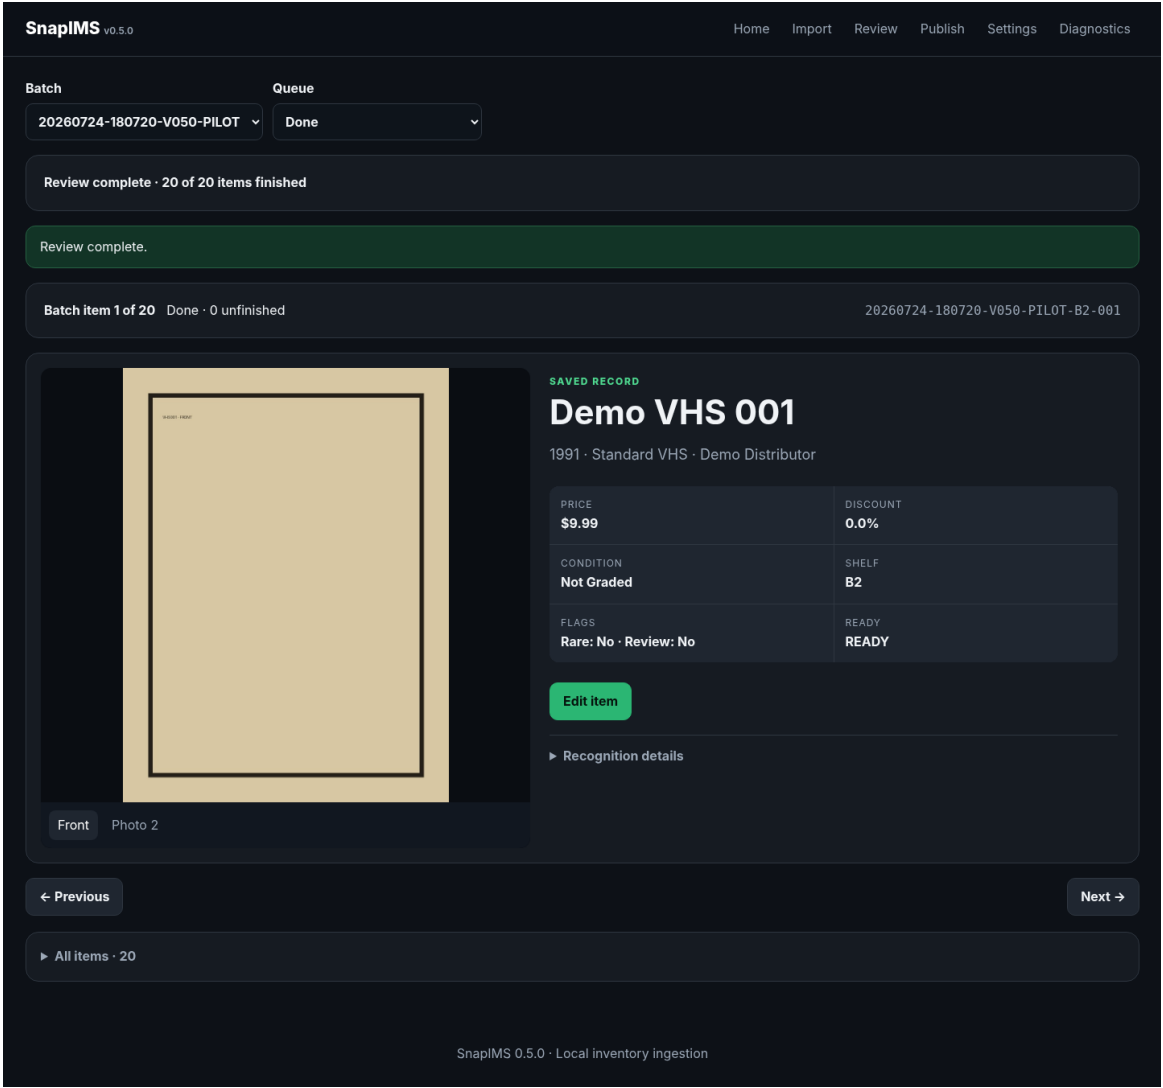

- Press Later when the tape needs research or physical inspection.
- The notice confirms the tape remains unfinished.
- Return through the Unresolved queue.

The screenshot displays the SnapIMS v0.5.0 web interface. At the top, a navigation bar includes links for Home, Import, Review, Publish, Settings, and Diagnostics. Below this, a 'Batch' dropdown is set to '20260724-180727-LATER' and a 'Queue' dropdown is set to 'Unresolved'. A status bar indicates 'Recognition complete · 2 items ready to review'. A green notification bar states 'Tape postponed and remains unfinished.' Below this, a header for 'Batch item 2 of 2' shows '2 unfinished' items and a unique identifier '20260724-180727-LATER-A2-002'. The main content area features a large image of a VHS tape labeled 'Photo 2'. To the right of the image, the title 'Demo VHS 002' is displayed under the heading 'AI SUGGESTION'. Below the title, it says '1992 · Standard VHS · Demo Distributor'. There are two input fields: 'Price CAD' with the value '9.99' and 'Discount %' with the value '0.0'. A prominent green button labeled '✓ Approve & Next' is positioned below these fields. Underneath the button are 'Edit' and 'Later' buttons. A section titled 'Recognition details' is partially visible. At the bottom of the interface, there are navigation buttons for '← Previous' and 'Next →', and a link to 'All items · 2'. The footer text reads 'SnapIMS 0.5.0 · Local inventory ingestion'.

Review complete

The batch-level completion message replaces ordinary recognition actions.

- Open the Done queue to inspect or correct completed records.
- Proceed to Publish only after unfinished count reaches zero.

Correct a completed item

Edit item opens the saved record, not stale AI output.

- Change only the incorrect fields.
- Save changes remains on the same immutable Item ID.
- The corrected record becomes authoritative in Review, CSV, and Publish.

Validation and Cancel

Invalid changes do not overwrite the last valid record.

- The editor stays open and lists exact blockers.
- Correct the fields or use Cancel changes to restore the saved record.
- Title and a price greater than zero are required.

The screenshot displays the SnapIMS v0.5.0 'Edit item' interface. At the top, a navigation bar includes links for Home, Import, Review, Publish, Settings, and Diagnostics. Below this, a 'Batch' section shows '20260724-180720-V050-PILOT' with a 'Queue' dropdown set to 'Done'. A status bar indicates 'Review complete: 20 of 20 items finished'. A red banner titled 'Changes not saved' lists two validation errors: 'Title is required' and 'Price must be greater than zero'. The main area is titled 'EXCEPTION EDITOR' and 'Edit item'. It features a large image placeholder on the left and a form on the right. The form fields include: Title (VHS 001 — Corrected in v0.5), Release year (1992), Barcode (012345678905), Studio / distributor (Demo Distributor), Edition / format (Standard VHS), Price CAD (18.49), Discount % (5.0), Quantity (1), Condition (Very Good), Shelf (B2), Location-change reason (Required only when shelf changes), Rare (checked), Physical Review (unchecked), Vendor (Canada VHS), Product type (VHS Tape), Tags (corrected_pilot), Condition notes (Corrected after sleeve inspection), Description (Corrected browser audit record), and Inventory mode (POOLED). At the bottom of the form are 'Save changes' and 'Cancel changes' buttons. Navigation buttons for 'Previous', 'Next', and 'All items - 20' are at the bottom of the page. The footer text reads 'SnapIMS 0.5.0 - Local Inventory Ingestion'.

Restart durability

A new application process reloads the saved record from SQLite.

- Confirm title, price, shelf, flags, and Item ID after restart.
- A recognition run abandoned during shutdown returns as Paused.

SnapIMS 0.5.0 · Local inventory ingestion

Publish simulation

Simulation uses the same saved records as Review and CSV.

- Confirm Ready and Blocked counts.
- Expand Payload preview for field-level reconciliation.
- Download inventory CSV before any live draft acceptance test.

The screenshot shows the SnapIMS 0.5.0 interface for the 'Shopify draft queue'. At the top, there's a navigation bar with links: Home, Import, Review, Publish, Settings, and SnapIMS. Below the navigation bar, the title 'Shopify draft queue' is displayed, followed by a subtitle 'Simulation is the default. SnapIMS creates drafts only.' and a 'Batch' dropdown menu set to '20200724-100720-V050-PILOT'. Below this, there are three summary boxes: 'Ready' with a count of 20, 'Blocked' with a count of 0, and 'Total' with a count of 20. There are two buttons: 'Publish selected drafts' (in green) and 'Download inventory CSV'. The main section is titled 'Simulation results' and contains a list of 20 items, each representing a draft. Each item has a status (e.g., 'Ready to create draft'), a 'Payload preview' link, and a unique ID (e.g., '20200724-100720-V050-PILOT-02-001'). The footer of the interface shows 'SnapIMS 0.5.0 - Local inventory ingestion'.

Missing incoming folder

Import fails closed and does not scan a different directory.

- Reconnect the device or open Advanced.
- Choose a valid folder and save it if it should become the new routine default.

☒ Save as incoming folder

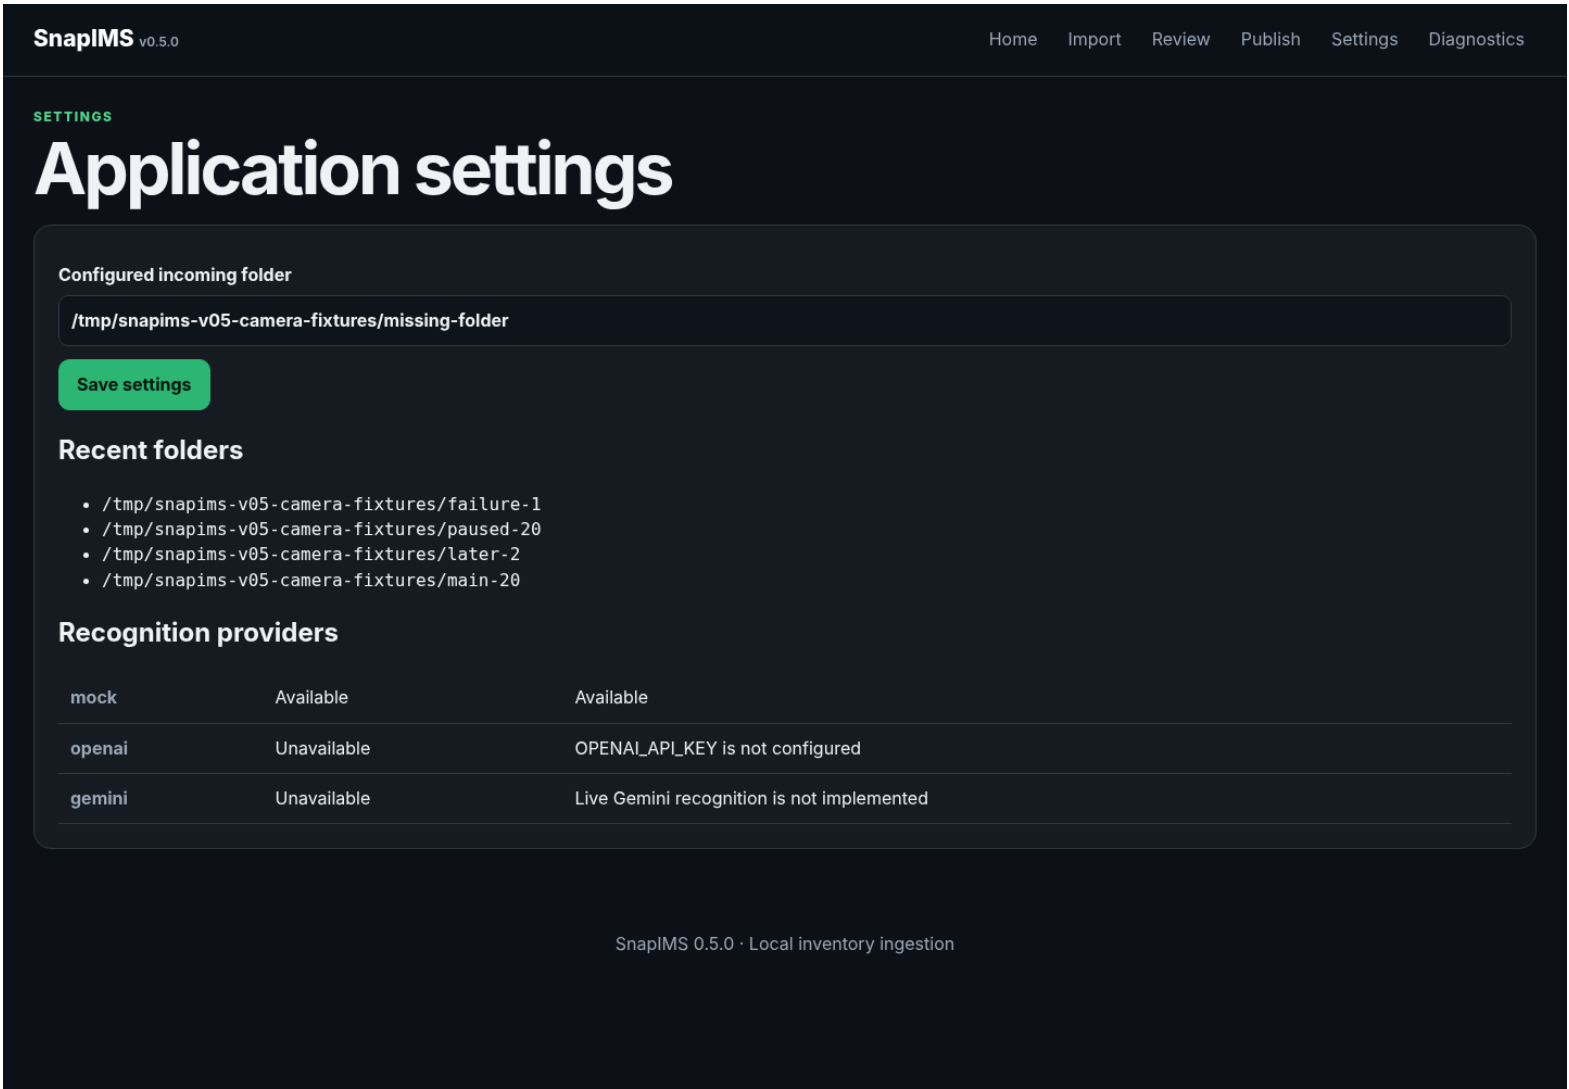

Use this folder

SnapIMS 0.5.0 · Local inventory ingestion

Settings

Settings centralize incoming-folder and provider status.

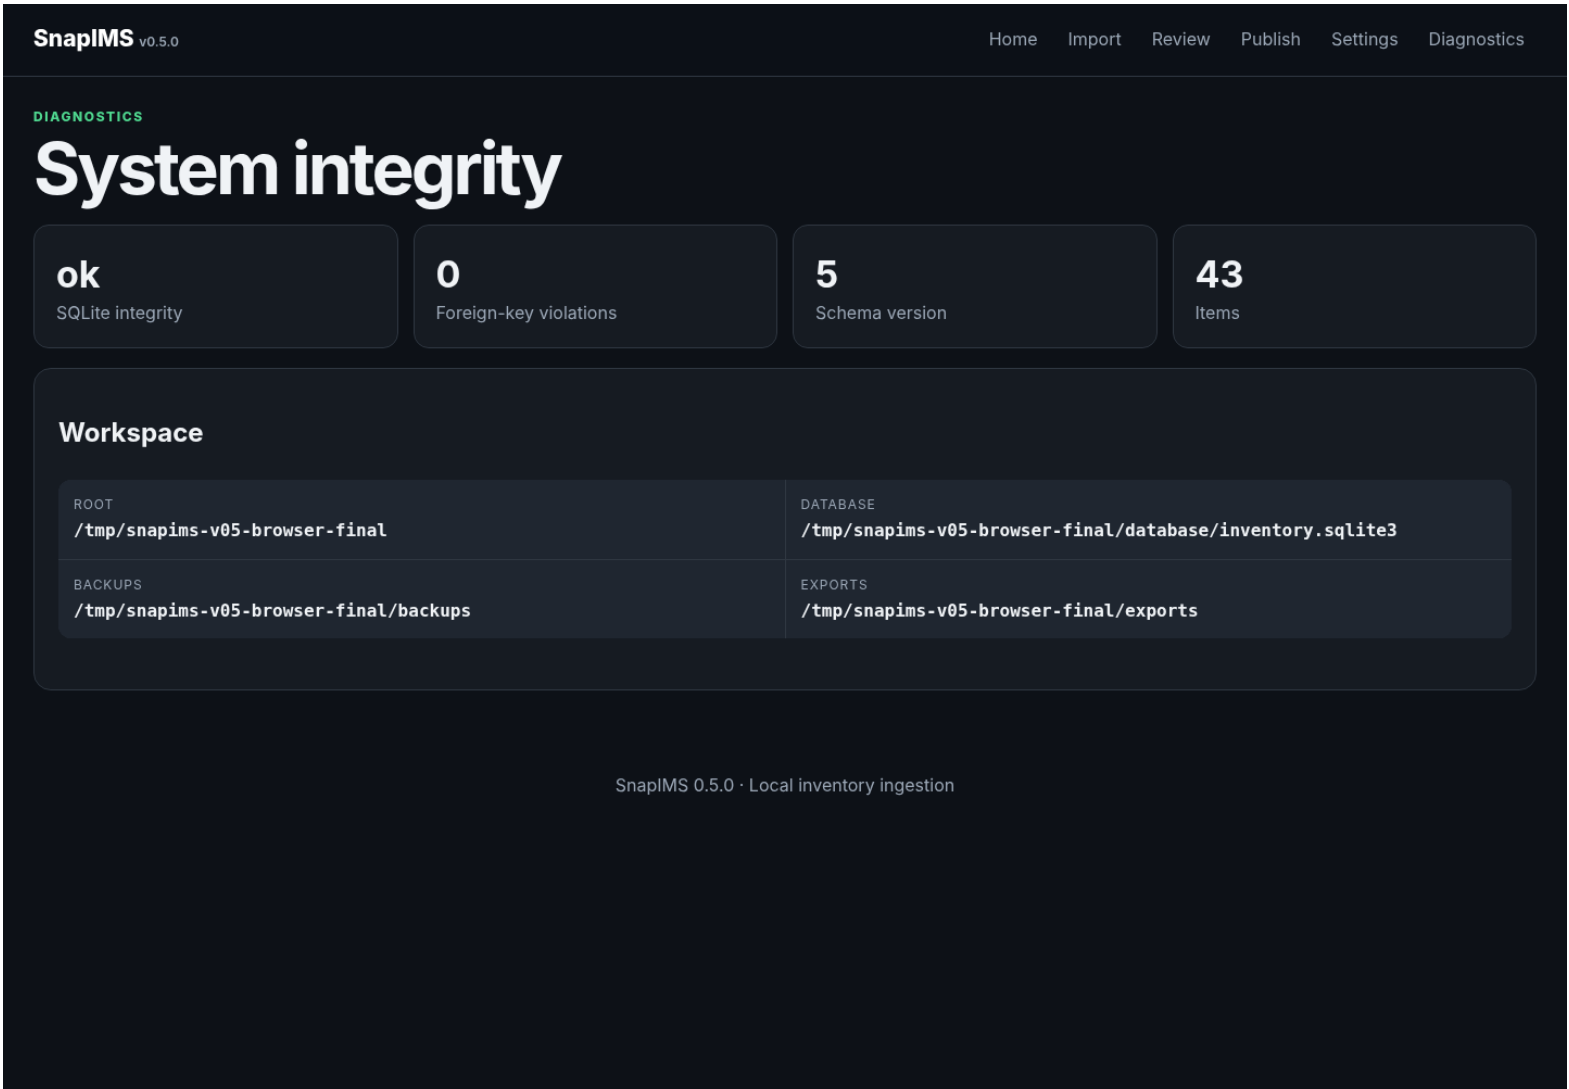

- Set the normal camera-roll folder.
- Review the bounded recent-folder list.
- Confirm the intended recognition provider is available before a real pilot.

Diagnostics

Diagnostics separates technical checks from routine operation.

- SQLite integrity must be ok.
- Foreign-key violations must be zero.
- Confirm schema version 5 and the workspace path before restoring a backup.

End-of-batch checklist

Complete this before treating a batch as finished.

- ☐ Unfinished count is zero and Review shows Review complete.
- ☐ Every title matches the photograph.
- ☐ Quick-edited Price and Discount values are intentional.
- ☐ Shelf and Rare / Physical Review flags match the physical tape.
- ☐ Completed corrections retain the original Item ID.
- ☐ Publish simulation shows expected Ready and Blocked counts.
- ☐ The downloaded CSV contains the same Item IDs and saved titles.
- ☐ For the first production pilot, Shopify remains simulation-only until CSV reconciliation passes.
- ☐ For a live-draft acceptance test, create exactly one draft and inspect it in Shopify before continuing.

1.0.0 is forbidden until the real Pixel pilot, live AI, live Shopify draft, CSV verification, restart durability, guide walkthrough, browser verification, and blocker review all pass.
